## 1. Introduction

Tokha Municipality, Maijuhiti, Kathmandu has received the fund from Government of Nepal and Bagamati Province for improvement of exiting water supply system. Municipality also, has allocated budget for construction and work along with budgetary provision to mobilize the technical support from experts and consultants. The Tokha Municipality, one of the best historical places for peaceful living is in the northern part of the Kathmandu valley. The urban area of the Kathmandu valley is rapidly expanding itself from the central core towards its rural periphery. Ward no. 2 and 3 of this municipality represents core traditional communities. In these ward, Local Water User's Committee have managed the water supply system in satisfactory level. The Committee is mainly dependent on ground water extraction and even in rainy season, the excessive quantity of water is flowing through stream with untapped due to lack of treatment plant and other necessary structures. Hence, municipality has decided to implement the project for improvement of exiting water supply system through upgrading of existing structures and, by constructing other structures which will support for rational use of water resource. The study shall be conducted for all settlement of two wards of existing water supply system. The detailed study and design reports shall be produced as the outcome of the detail survey and Design of the treatment plant other structures so that immediate actions could be undertaken for their implementation.

For this **Tokha Municipality, Maijuhiti, Kathmandu** is seeking to employ a Consultancy firm to carry out the **Detailed Engineering Study,field work, Design of New Water Treatment Facilities or Improving Existing water treatment Facilities and 20 km combined total length of transmission of water supply in Chandeshwori/Shivapuri Area, ward-2,3)**

## **5. Approach and Procedures**

Prior to the visit to the project area, Feasibility Study Report (if feasibility had been conducted in the project area beforehand) is reviewed and the possibilities for modifications/improvement on the proposals of the feasibility study shall be investigated and incorporated wherever possible/required during detail survey.

The methodology adopted for conducting detailed field study and survey for preparing a detailed engineering report should be based on wide community participatory approach. The detailed study report should strictly follow the departmental design guidelines and GON directives.

### **Technical Aspects**

The technology adopted should be simple, socially, culturally and environmentally acceptable and its operation and maintenance should be affordable and manageable by the community. Standard structures should be used as far as possible and maximum utilization of locally available construction materials should be ensured for the ease of construction and operation and maintenance.

The detailed study report should be fairly described to the extent that it provides complete details on the following technical aspects required for the smooth implementation of the projects and sustainable operation and maintenance after execution.

- Existing water supply and sanitation projects/schemes in the wards related to the project (cross checked through provincial and national data);
- Existing situation of water supply in the project area in relation to issues of quantity and quality of water available, hardship, waiting time and mode of collection (type of source);
- Project is a new one or being implemented for interference or supplement such as rehabilitation or upgradation or extension to existing system/s within the project area;
- Succinct information on the intake site, safe yield, water quality, and water right issues (disputes) for the proposed sources;
- Water demand and level of adequacy;
- Coverage data on households, population and institutions in terms of additional coverage  
Or reinstatement of service;
- Components, technology and methodology adopted in system designing;

- Standard methods should be adopted in water sample collection and transportation of samples to laboratory for water quality analysis.

**Selection of source**

- Perennial spring sources will be preferred over stream sources wherever practical. Special note will be taken of upstream pollution possibilities due to farming; secondary uses of the source like washing clothes and cattle grazing, habitation etc;
- Source yield assessment and ascertainments will be made through average of 3 minimum readings;
- Source yield assessments will be preferably carried out in dry season; sufficient allowance for drying should be made based upon thorough consultation with villagers, past experience and observation for source measurements in other seasons;
- Sources with a safe discharge measuring less than 0.10 lps should not be considered;
- In case of deep well boring, water table yield and quality of underground water should be assessed from nearby existing deep tube wells;
- protection measures require for stability and safe guarding against pollution will be clearly indicated;
- WTP with its type, if required will be clearly suggested.

## PART II

### Section 8. Conditions of Contract and Contract Forms

#### Foreword

1. Part II includes standard Contract forms for Consulting Services (a Lump-Sum Contract).
2. **Lump-Sum Contract:** This type of contract is used mainly for assignments in which the scope and the duration of the Services and the required output of the Consultant are clearly defined. Payments are linked to outputs (deliverables) such as reports, drawings, bill of quantities, bidding documents, or software programs. Lump-sum contracts are easier to administer because they operate on the principle of a fixed price for a fixed scope, and payments are due on clearly specified outputs and milestones. Nevertheless, quality control of the Consultant's outputs by the Client is paramount.
